## DETAILED ACTION

### *Election/Restrictions*

1. Restriction to one of the following inventions is required under 35 U.S.C. 121:
  - I. Claims 1-8 and 24-26, drawn to the apparatus comprising the microencapsulation system, classified in class 425, subclass various.
  - II. Claims 9-18, drawn to the apparatus comprising dual dispensers, classified in class 222, subclass various.
  - III. Claims 19-23, drawn to the method of fabricating and processing microcapsules, classified in class 264, subclass 4.1.

The inventions are distinct, each from the other because of the following reasons:

2. Inventions I and II are related as combination and subcombination. Inventions in this relationship are distinct if it can be shown that (1) the combination as claimed does not require the particulars of the subcombination as claimed for patentability, and (2) that the subcombination has utility by itself or in other combinations (MPEP § 806.05(c)). In the instant case, the combination as claimed does not require the particulars of the subcombination as claimed because a single dispenser unit can be utilized to create a spherical droplet which can be coated via well know processes to form a co-axial multi-lamellar microcapsule. The subcombination has separate utility such as to readily deposit two different ingredients (one enclosed by the other) on any surface, for example the formation of chocolate covered caramel spherical or laminar particles.
3. Inventions III and I (II) are related as process and apparatus for its practice. The inventions are distinct if it can be shown that either: (1) the process as claimed can be practiced by another materially different apparatus or by hand, or (2) the apparatus as claimed can be used to practice another and materially different process. (MPEP § 806.05(e)). In this case the apparatus as claimed

Art Unit: 1711

in invention I, can be used to practice another and materially different process such as cellular harvesting. Furthermore, the dual dispensing apparatus as claimed in invention II, can be used to practice another and materially different process such as the formation of chocolate covered caramel spherical or laminar particles.

4. Because these inventions are distinct for the reasons given above and have acquired a separate status in the art as shown by their different classification, restriction for examination purposes as indicated is proper.

5. A telephone call was made to James Cate on August 29, 2005 to request an oral election to the above restriction requirement, but did not result in an election being made.

Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement can be traversed (37 CFR 1.143).

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Saira Raza whose telephone number is (571) 272-3553. The examiner can normally be reached on Monday-Friday from 9am-5pm.
